

UNIMAR 3.0

An ideal and highly reliable material for today's bathrooms. All VANICO-MARONYX bathtubs, sinks and shower pans are made of this **unique engineered resin** created by mixing high-tech ingredients and finely powdered stone.

ROBUST STRUCTURE

The ½" or 1" thick inner structure of UNIMAR 3.0 is stronger and more durable than acrylic. This engineered resin has passed all tests of the harmonized Canada/U.S. standard CSA B45.5/IAPMO Z124_2011.

THERMAL SHOCK RESISTANCE

The thermal shock resistance considerably exceeds the ANSI "Thermal Shock Standards" which test 500 successive hot and cold water cycles.

DURABLE

Its resistance to impacts and scratches have made UNIMAR 3.0 the choice of thousands of consumers, hotels and condo projects. The durability of the UNIMAR 3.0 ensures a long product life.

LOW VOC

Engineered resin with very low volatile organic compounds (VOCs).

INSULATING

Natural isothermal property that maintains hot water temperature and thermal comfort longer than acrylic baths. This heat retention capacity also promotes environmentally significant energy savings.

UV RESISTANT

Long-term color stability and UV resistant. Resistant also to hard water, yellowing, cracks, osmosis, blistering and porosity.

NON-POROUS AND ULTRA-RESISTANT

UNIMAR 3.0 is a non-porous material, and highly resistant to stains, cosmetics and bacteria. The surface is covered with a layer of thermosetting gelcoat that protects the finish of our products. Made with a top quality polyester resin compound, this gelcoat is specially designed for products exposed to water and temperature variations such as boats, wind turbine blades and plumbing fixtures.

STYLISH LOOK

This ultra-glossy, smooth surface is pleasant to the touch and provides good grip for the feet. UNIMAR 3.0 offers longlasting brilliance.

CONTROLLED MANUFACTURE

UNIMAR 3.0 is mixed by a fully computerized vacuum mixer, the most powerful in Canada, providing a smooth consistency and precise control of uniformity and hardness.

HIGH QUALITY FINISH

After molding, each product is carefully machined, cleaned, checked and hand polished.

EASY CARE

Easy to clean and easy to polish.

CHOICE OF COLORS

White U-00
Extra for any other color.

Conscious of its commitment, VANICO-MARONYX makes every effort to contribute to a healthy and sustainable environment.

BATHTUB

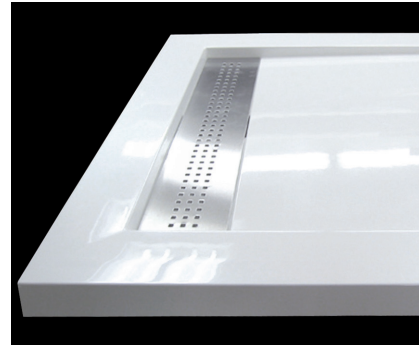

The UNIMAR 3.0 bathtubs have a natural heat insulating property. Its ultra-glossy surface is smooth and is pleasant to the touch.

The water stays warm much longer than acrylic bathtubs thanks to the thermal effect.

SHOWER PAN

UNIMAR 3.0 shower pans offer amazing slip resistance as well as superior performance compared to acrylic.

Density of the material brings sturdiness and solidity to the pan in addition to muffeling the noise of pounding water.

SINK

Integral one-piece sinks and vanity tops.

The absence of joints facilitates cleaning and prevention of mildew.

Offers excellent resistance to temperature changes between hot and cold water.
